

### **Stainless Steel Refrigeration**

Smeg stainless steel refrigeration is available in a variety of widths and styles. Smeg combine elegant design with high quality components and the best grade of stainless steel to create desirable and practical appliances. Stainless steel is used for its aesthetic appearance - looking bright, modern and attractive at all times - it is strong, durable, hygienic and easily maintained.

#### **Wine Cooler**

The SCV115 wine cooler is tall and slim, with gloss black sides and a glass door with anti UV ray tint, which has a stainless steel handle to co-ordinate with other Classic and Opera appliances. It has two temperature zones and can store between 115 and 198 standard 75 cl bottles, depending on the storage layout and temperature required.

### **American side-by-side refrigeration**

Smeg American side-by-side refrigeration is available in 5 different models, the majority of which are rated 'A+' for energy efficiency. The temperatures in the refrigerator and freezer sections can be controlled separately and are displayed on the electronic control panel above the ice dispenser. They can be adjusted up or down at the touch of a button, and there is also a special vacation button that can be set to conserve energy when on holiday. The panel can be locked so that children cannot inadvertently change the settings.

#### **Built-in refrigeration**

A selection of 'in column' and under worktop built-in refrigeration can be found on pages 196-199.
